Country Overview

Population and Demographics

Capital	Abuja[1]	**Official language**	English[1]
Population	About 237.5 million (2025 estimate)[2]	**Area**	923,768 sq km[3]
GDP (PPP), total	About 2.26 trillion international dollars (2025)[4]	**GDP (PPP), per capita**	About 9,530 international dollars (2025)[5]
Government type	Federal presidential republic[1,6]	**Head of state and government**	President Bola Ahmed Tinubu (in office since 29 May 2023)[6]
Currency	Naira (₦)[7]	**Urban population**	63.8% of total (2025)[8]
Total fertility rate	4.38 births per woman (2024)[9]	**Life expectancy at birth**	54.6 years (2024)[10]
Infant mortality rate	69.8 per 1,000 live births (2024)[11]		

Nigeria had about 237.5 million people in 2025, according to the World Bank, with annual growth of 2.1 percent.[2,12] The population is very young: 40.5 percent are under 15 and only 3.1 percent are 65 or older.[13,14] Fertility is falling but remains high at 4.38 births per woman in 2024, and life expectancy at birth was 54.6 years.[9,10] About 64 percent of Nigerians live in urban areas.[8] Infant mortality was 69.8 per 1,000 live births in 2024.[11] The World Bank also notes that 3.5 million people enter the labor force each year, which puts pressure on jobs.[6]

For an international academic medical center, this means a very large and growing population with limited public capacity, concentrated in cities where private and insured demand for specialty care is most likely to emerge. The older population is small today, but the absolute numbers of adults with chronic disease will rise quickly with population growth.

Government

Nigeria is a federation of 36 states and the Federal Capital Territory, Abuja.[1,6] Bola Tinubu has been president since 29 May 2023, the fifth president since the return of democracy in 1999.[6,15] The ruling All Progressives Congress controls the executive and holds majorities in the National Assembly and in most states.[6] The Senate has three senators from each state and one from the capital territory, and the constitution sets the legislature's term at four years.[1] The Independent National Electoral Commission rescheduled the next presidential and National Assembly elections to 16 January 2027, with governorship and state assembly elections on 6 February 2027.[16] Health policy is led by Professor Muhammad Ali Pate, the Coordinating Minister of Health and Social Welfare.[17,18] The federal government sets the regulatory framework, while the 36 states and their local governments manage general hospitals and primary health care centers.[19] Federal reforms therefore depend on state cooperation, and a change in political priorities after the 2027 elections is a point to watch for any long-term partner.

Economy

Nigeria's economy has been reshaped by reforms begun in 2023, which the World Bank lists as subsidy removal, exchange rate unification and tighter monetary policy.[6] Real GDP grew 4.2 percent in the first half of 2026, up from 3.9 percent a year earlier, led by services and stronger agriculture, and the Bank projects average growth of 4.4 percent a year from 2026 to 2028.[6] Headline inflation fell from 27.4 percent in March 2025 to 15.1 percent in February 2026, and gross reserves reached $51.9 billion at the end of July 2026 on higher oil exports and portfolio inflows, though the Bank warns that reliance on short-term portfolio flows is a vulnerability.[6] Inflation was 14.63 percent in September 2026,[20] and the central bank, which had held its policy rate at 26.5 percent, cut it to 23 percent on 22 September 2026.[6,21] Poverty is the main drag: an estimated 69.6 percent of Nigerians lived below $4.20 a day in 2025.[6] The National Bureau of Statistics reported growth of 3.89 percent year on year in the first quarter of 2026 and 4.43 percent in the second.[22,23] The Renewed Hope National Development Plan 2026 to 2030 prioritizes economic diversification, human capital and private sector-led growth,[24] and the administration has tied it to a goal of a $1 trillion economy by 2030.[25] A steadier naira and lower inflation may help private hospitals plan and import equipment, but household incomes remain thin.

Disease Prevalence

Deaths from communicable, maternal, prenatal and nutritional conditions	63.7% of deaths (2021)[26]	**Deaths from noncommunicable diseases**	27.7% of deaths (2021), up from 21.5% in 2010[27]
Probability of dying aged 30 to 70 from cardiovascular disease, cancer, diabetes or chronic respiratory disease	17.7% (2021)[28]	**Malaria incidence**	294 per 1,000 people at risk (2024)[29]
Share of malaria deaths in the WHO African Region	31.9% (2024)[30,31]	**Maternal mortality ratio**	993 per 100,000 live births (2023, modeled)[32]
Under-five mortality	115.6 per 1,000 live births (2024)[33]	**Stunting, children under five**	33.8% (2021)[34]
HIV prevalence, ages 15 to 49	1.2% (2024)[35]	**Cancer burden (Health Minister)**	About 127,000 cases and 80,000 deaths a year[36]

Nigeria carries a double burden of disease. Communicable, maternal, prenatal and nutritional conditions caused 63.7 percent of deaths in 2021, while noncommunicable diseases caused 27.7 percent, up from 21.5 percent in 2010.[26,27] Malaria remains the largest single threat. The World Health Organization estimated 282 million cases and 610,000 deaths worldwide in 2024, and Nigeria accounted for 31.9 percent of malaria deaths in the WHO African Region.[30,37] Maternal and child outcomes are poor: the modeled maternal mortality ratio was 993 per 100,000 live births in 2023, under-five mortality was 115.6 per 1,000 live births in 2024, and 33.8 percent of children under five were stunted in 2021.[32,33,34] The probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes or chronic respiratory disease was 17.7 percent in 2021.[28] Health Minister Pate has said Nigeria records about 127,000 cancer cases and 80,000 cancer deaths a year.[36] The rise in chronic disease alongside an unfinished infectious disease agenda means demand is growing for cancer, cardiovascular and maternal care, the areas that depend most on specialist capacity.

Nigeria Health System

Public Healthcare System

Nigeria's public system runs on three levels of government. The federal government's role is mainly regulatory, and the 36 states and their local governments manage general hospitals and primary health care centers.[19] As of mid-2021 the Federal Ministry of Health counted 40,368 hospitals and clinics, of which 85.2 percent were primary, 14.4 percent secondary and 0.4 percent tertiary.[19] Since 2023 the Presidential Health Sector Renewal Investment Compact has tried to align federal, state and donor spending behind one plan, and the ministry reported that 84 percent of its key performance indicators had been met by the third quarter of 2025, a self-reported figure.[17] Visits to facilities funded by the Basic Health Care Provision Fund rose from 10 million in early 2024 to 45 million by mid-2025, and more than 20,000 frontline health workers were recruited into federal tertiary hospitals.[17] Insurance is growing from a small base. The National Health Insurance Authority said in July 2026 that enrollment had reached 22.03 million, up 35 percent in a year as mandatory provisions are phased in,[38] and in September 2026 that it had passed 23 million.[39] By our calculation that is roughly 10 percent of the World Bank's 2025 population estimate of 237.5 million.[2] At the top of the system, the government is equipping federal teaching hospitals with cancer centers, including the first three inaugurated in July 2025.[40] Tertiary capacity is still scarce: tertiary facilities made up only 0.25 percent of the facility register in one peer-reviewed analysis.[41]

Private Healthcare System

Private providers are a large part of the system. Federal Ministry of Health data for mid-2021 counted 10,900 private facilities, 27 percent of the total,[19] and a peer-reviewed analysis of the ministry's facility register found 33 percent private, with secondary facilities mostly privately owned.[41] Reports on the December 2025 U.S. health memorandum say Christian faith-based clinics are about 10 percent of providers but serve more than 30 percent of Nigerians.[42] Most care is paid for by households, with out-of-pocket payments at 71.9 percent of current health spending in 2023,[43] so private demand depends on ability to pay. Foreign capital is entering at the high end. Evercare Group, which at its 2021 launch was owned by a $1 billion fund managed by TPG Growth, built the 165-bed Evercare Hospital Lekki in Lagos,[44] and India's Padiyath Healthcare has announced $100 million of investment, starting with a 300-bed hospital in Abuja.[45] In February 2026 the IFC and the Nigeria Sovereign Investment Authority's MedServe arranged naira financing for more than a dozen diagnostic and cancer centers in a $154.1 million project.[46]

Healthcare Financing

Current health expenditure, share of GDP	4.19% (2023)[47]	**Current health expenditure per capita**	US$66.82 (2023, current US$); US$89.63 in 2022[48]
Out-of-pocket share of current health expenditure	71.9% (2023)[43]	**Government share of current health expenditure**	14.3% (2023), or 0.60% of GDP[49,50]
External share of current health expenditure	11.3% (2023)[51]	**Regional comparison, health expenditure share of GDP (2023)**	Ethiopia 2.80%, Ghana 2.95%, Kenya 4.35%, Egypt 4.88%, South Africa 8.91%[52]
Federal health budget, 2026	Proposal: N2.48 trillion, about 4.2% of the proposed N58.47 trillion budget; the enacted N68.32 trillion budget added N482.76 billion for health[53,54,55]		

Nigeria spends modestly on health and households carry most of the cost. Current health expenditure was 4.19 percent of GDP in 2023, or US$66.82 per person, compared with 4.35 percent in Kenya, 4.88 percent in Egypt and 8.91 percent in South Africa.[47,48,52] Out-of-pocket payments were 71.9 percent of that spending, government financed 14.3 percent, and external sources supplied 11.3 percent.[43,49,51] The 2026 federal proposal gave health N2.48 trillion, about 4.2 percent of the budget, well below the 15 percent target of the 2001 Abuja Declaration, although nine states proposed 15 percent or more of their 2026 budgets for health.[53,54,56] The Appropriation Act signed in April 2026 raised total spending to N68.32 trillion and added N482.76 billion for priority health interventions; the final health share has not been published in the sources reviewed.[55,57] The finance minister said in November 2025 that health's share of the 2025 federal budget had risen to 5.2 percent from just over 3 percent.[17] Under the December 2025 memorandum with the United States, Washington intends to provide $2.1 billion over five years and Nigeria to add $3.0 billion in new domestic health spending.[58] It is not yet clear whether Nigeria will deliver its domestic share.

Workforce

Physicians per 1,000 people	0.38 (2023); 0.36 in 2018[59]	**Practicing doctors (Federal Ministry of Health)**	About 55,000 in 2025, down from 66,241 in 2024 (ministry figures as reported by BusinessDay)[60]
Doctors and dentists who emigrated in 2024	4,193, about 66% of them to the United Kingdom[60]	**Medical schools**	45 fully accredited and 20 partially accredited, with capacity for about 7,600 doctors a year[61]
Resident doctors (NARD)	About 8,000, down from about 15,000 over the past 10 years[61]	**Medical and dental consultants (November 2024)**	About 6,137[61]

Nigeria has 0.38 physicians per 1,000 people, against a world figure of 1.86 in 2022 and just above Ghana at 0.27 and Kenya at 0.29.[59,62] According to Federal Ministry of Health figures reported by BusinessDay, about 55,000 doctors were practicing in 2025, down 16.9 percent from 66,241 in 2024, and the 2025 Joint Annual Review attributed the fall largely to emigration.[60] External migration of health workers rose 200 percent between 2023 and 2024, and 4,193 doctors and dentists left in 2024, about two thirds of them for the United Kingdom.[60] The training pipeline is also thinning at the specialist level: the resident doctors' association says its membership fell from about 15,000 to about 8,000 over a decade, and the country has about 6,137 consultants.[61] The ministry says it recruited more than 20,000 frontline health workers into federal tertiary hospitals.[17] A 15-year cohort study cited in a 2025 review found that 48.9 percent of graduates of one major Nigerian medical school had emigrated within 15 years of qualifying.[63] For a foreign partner, training and retention programs are likely to be more useful than staffing support.

Education

Medicine and Surgery is a six-year program in Nigeria, with a preliminary science year, two preclinical years and three clinical years.[64] The country has 45 fully accredited and 20 partially accredited medical schools, with capacity to produce about 7,600 doctors a year, so undergraduate output is not the main bottleneck.[61] Postgraduate training runs through the National Postgraduate Medical College of Nigeria and the West African Colleges of Physicians and Surgeons, whose examinations set residency standards.[61,63] Many doctors emigrate shortly after graduating or in the first years of residency.[61] In August 2025, 927 Nigerian candidates sat the West African College of Surgeons primary examination, and 678 of them, or 73.1 percent, passed.[61] Trainees report weak supervision, limited mentorship and uneven institutional support in residency programs.[63] A 2025 survey of 2,152 medical and nursing students at six universities found that 72.9 percent intended to practice abroad, mostly to train, with the United States, the United Kingdom and Canada as the top destinations.[64] Programs that offer specialist training inside Nigeria, with external faculty and shared curricula, address the reason students most often give for leaving.

Healthcare Outlook

The direction of policy is favorable and the financing is improving, but delivery is uneven. The ministry reports 84 percent of its renewal compact indicators met by the third quarter of 2025, health insurance enrollment passed 23 million in September 2026, and the United States and Nigeria signed a five-year, $5.1 billion health cooperation memorandum in December 2025.[17,39,58] The World Bank projects growth averaging 4.4 percent a year from 2026 to 2028 and inflation falling toward 12 percent by 2028, which should ease pressure on household budgets.[6] The risks are substantial: the 2026 budget proposal gave health about 4.2 percent of spending, and the final share of the larger enacted budget has not been published,[54,55] out-of-pocket payments are still 71.9 percent of health spending,[43] the number of practicing doctors fell about 17 percent in a year,[60] and national elections are set for January 2027.[16] The likely openings for an international academic medical center are specialty training, cancer and cardiac programs at federal teaching hospitals, and quality systems for the growing private sector. Demand will come from insured and private patients first, and from public programs more slowly.

Competitive Landscape

Foreign health systems mostly work through private operators and academic partnerships. Evercare Group, which at the hospital's 2021 opening was owned by a $1 billion fund managed by TPG Growth, built the 165-bed Evercare Hospital Lekki in Lagos,[44] and Turkish investors opened Nizamiye Hospital in Abuja in 2014.[65] India's Padiyath Healthcare announced $100 million of investment in November 2024, starting with a 300-bed hospital under construction in Abuja.[45] The University of Maryland School of Medicine and Lagos University Teaching Hospital announced a chronic disease collaboration in August 2024, initially for four to five years with a stated ten-year ambition,[66,67] and UVA Health supports the kidney transplant program at the Federal Medical Centre Umuahia.[68]

University of Birmingham	United Kingdom	Training and education	2026-01[86]
University of Glasgow	United Kingdom	Research collaboration	2026-04[87]

Only partnerships with dated evidence of activity in the last 24 months are listed. Unclear and recently ended partnerships are in the CSI partnerships tracker.

Estimates of medical tourism spending vary widely. Central Bank of Nigeria data show $549 million spent on health-related travel in the first nine months of 2025, up 18 percent on 2024, though officials and industry put the true total higher because many payments bypass official channels.[88] India has long been the main destination; in 2013, 47 percent of Nigerians visiting India went for medical care.[89] American Hospital Dubai says it opened three patient offices in Nigeria in 2024.[90] Citing cancer care as the main reason patients leave, the government opened oncology centers in Katsina, Enugu and Benin City in July 2025.[40] Officials say the renewal plan could keep 850 billion naira lost to medical tourism at home.[17]

Recent Developments

2026-10-20 Nigeria confirms imported Ebola case in Abuja

The Federal Ministry of Health and Social Welfare confirmed one imported case of Ebola Bundibugyo virus disease in a woman who had recently traveled from Uganda. She sought care at a private facility in Abuja on 11 October, was confirmed on 20 October and is in isolation, and 44 contacts are being monitored.[91,92] Nigeria is the fifth country to detect the virus since the outbreak was declared in the Democratic Republic of the Congo in May 2026.[91]

2026-07-09 Health insurance enrollment passes 22 million

The National Health Insurance Authority said in July 2026 that enrollment had reached 22.03 million, up 35 percent from a year earlier, as the mandatory provisions of the NHIA Act are phased in.[38] The director general also cited support for more than 48,500 pregnant women and sanctions on non-compliant facilities.[38]

2026-02-03 IFC and NSIA finance cancer and diagnostic centers

The IFC and the Nigeria Sovereign Investment Authority arranged naira financing for MedServe, which will build over a dozen diagnostic, radiotherapy and cardiac catheterization centers. The project is worth $154.1 million, including about 14.2 billion naira from the IFC.[46]

2026-01-27 Practicing doctors fall by nearly 17 percent

Federal Ministry of Health figures reported by BusinessDay put practicing doctors at about 55,000 in 2025, down from 66,241 in 2024. The 2025 Joint Annual Review cited emigration, and 4,193 doctors and dentists left in 2024, about 66 percent of them for the United Kingdom.[60]

2025-12-21 United States and Nigeria announce $5.1 billion health memorandum

The U.S. Mission announced a five-year health cooperation memorandum in which the United States intends to provide $2.1 billion and Nigeria to invest $3.0 billion in new domestic health spending. It includes about $200 million for more than 900 Christian faith-based facilities.[42,58]

2025-07-24 Three federal oncology centers inaugurated

The federal government inaugurated oncology centers at teaching hospitals in Katsina, Enugu and Benin City, with three more planned for Zaria, Jos and Maiduguri.[36] Minister Pate said the centers respond to about 127,000 cancer cases and 80,000 deaths a year and are meant to reduce medical tourism.[36,40]
